

# Cliploader Cleaning Instructions

1. First lay the loader on a table (wording side down). Using a Phillips Screwdriver remove the 5 - #6 x 1/2" pan screws.

2. Lift the top half of the loader off and lift out the slide cover. Wash with warm soapy water (Dawn or liquid Dishwasher soap) rinse and dry thoroughly.

3. Give the inside of the trough a light spray of Rem Oil.

4. Place the cover back in the groove.

5. Place the top back on, placing the groove on the slide cover.

6. Hold the loader while replacing the 5 screws that you had removed. When replacing the screws, start by turning the screw counterclockwise until you feel it drop into place, then turn clockwise. Have all 5 screws started before you begin to tighten them.
