

# Cleaner Bores, Meaner Scores!

Only With USP Bore Paste™  
The Original Formula™

- Optimizes accuracy by thoroughly removing copper, lead, carbon powder and plastic wad fouling from firearms
- Quicker, safer and more effective than toxic solvent baths

## 4 Quick Steps To Optimal Accuracy

US  
P

Always wrap cotton patch around a 1-caliber smaller brass core bronze brush for rifle or handgun and same size brush for shotgun. Use bore guide to keep rod centered and protect lands and grooves. Keep a snug fit by pushing patch only partially out of muzzle with each stroke.

1. Saturate cotton patch with USP Gun Cleaning Oil™ and push through bore. Throw away patch.
2. Put clean cotton patch on brush; then push through bore and partially out muzzle. Apply USP Bore Paste; then pull patch through bore and push partially out muzzle 10 to 12 times. Throw away patch. Repeat if necessary. In stubborn cases, clean when barrel is warm.
3. For immediate use, spray cotton patch with USP Gun Cleaner/Degreaser™; then run through bore to ensure it's clean and dry. Throw away patch. Repeat if necessary.
4. For storage, simply run a dry patch through the bore and partially out of the muzzle. Apply USP Gun Cleaning Oil; then pull through the bore and push completely out of muzzle leaving a thick coat of protective oil.

# USP Bore Paste Instructions...

## 4 Quick Steps to Optimal Accuracy

Always wrap a cotton patch around a 1-caliber smaller brass core bronze brush for rifle or handgun and a same size brush for shotgun. Use a bore guide if possible to keep the rod centered and protect lands and grooves (and crown). Keep a snug fit by only pushing the patch partially out of the muzzle with each stroke. (Clean from the chamber end if possible).

1. Saturate a cotton patch with USP Gun Cleaning Oil and push through the bore. Throw away the patch.
2. Put a clean patch on the brush then push through the bore and partially out the muzzle. Apply USP Bore Paste then pull the patch back through the bore and push partially out the muzzle 10-12 times. Throw away the patch. Repeat if necessary. For stubborn fouling, clean when the barrel is warm (from shooting).
3. For immediate use, spray the cotton patch with cleaner/degreaser then run through the bore to ensure it's clean and dry. Throw away the patch. Repeat as necessary.
4. For storage, simply run a dry patch through the bore and partially out the muzzle. Apply USP Gun Cleaning Oil; then pull back through the bore and push completely out of the muzzle leaving a thick coat of protective oil.
