I am including this letter to answer some of the questions we get quite often regarding the Sniper and Varmint stocks. You can also find helpful information at our web site, [www.riflestock.com](http://www.riflestock.com) under the Information category.

One of the most commonly asked questions is about the bipod adaptor that is used to attach the Harris bipod to the stock. The reason for this system is so you can carry more than one length of bipod and quickly change for one to the other. You can order extra bipod adaptors from us part # 22-05-02. If you want your bipod to rest solid against the stock you can order one of the short adaptors part # 22-05-03.

You can add weight to the stock by mixing lead shot with epoxy and pour it into the grip and rear of the stock.

If you have any questions please call us at 1-800-972-6390.

Thanks

Fred Choate
